PIGEON

Scientific Name:- Columba livia

A pigeon is any of hundreds of species of birds in the family Columbidae (order Columbiformes). The smaller forms are usually called pigeons and the larger one's doves. The exception is the domestic white pigeon, called the dove of peace.

CROW

Scientific Name:- Corvus brachyrhynchos

Crow, (genus Corvus) is any of the

shiny black birds found in most parts of the world except South America. Crows are generally smaller and do not have large beak-like ravens, which belong to the same genus. Most of the 40 or so species of *Corvus* are known as crows, and the name has been applied to other, unrelated birds. Large crows are about 0.5 m long and have a wingspan of up to 1 m.

DUCK

Scientific Name:- Anisoptera

Duck is one of several species of relatively small, short-necked, large-beaked waterfowl. In true ducks, which belong to the subfamily Anatinae of the waterfowl family (Anatidae), the legs point backward, as in swans, rather than forwards, as in geese. The result is a characteristic duck-like gait.

COCK

Scientific Name:- Gallus gallus domesticus

A cockerel is a term for an adult male bird, while a younger male may be called a cockerel. A neutered male is a gelding. An adult female is called a hen and a sexually mature female is called a colt.

PARROT

Scientific Name:- Psittaciformes

Parrot, a term for a large group of showy birds of the family Psittacidae. The term parrot also refers to any member of a larger group of birds, the order Psittaciformes, which includes cockatoos (family Cacatuidae). Parrots have been kept as caged birds since ancient times and have always been popular because they are funny, intelligent, and often affectionate. Some are amazingly good at imitating many sounds, including human speech.

OWL

Scientific Name:- Strigiformes

Owl, (order Strigiformes), is any member of a homogeneous order of predominantly nocturnal birds of prey found almost everywhere in the world. The bird of Athena, the Greek goddess of practical reason, is the owl (Athene noctua). Owls became a symbol of intelligence because they were believed to be able to predict events.

PEACOCK

Scientific Name:- Pavo cristatus

Peacock also called a peacock is any of the three species of glossy birds in the pheasant family, Phasianidae (order Galliformes). Strictly speaking, the male is a peacock and the female is a peacock; both are peacocks. The two best-known peacock species are the Indian or blue peacock (Pavo cristatus), which is widespread in India and Sri

Lanka, and the green or Javanese peacock (P. muticus), which is widespread from Myanmar (Burma) to Java.

SWAN

Scientific Name:- Cygnus

Swan, the largest species of waterfowl in the subfamily Anserinae, family Anatidae (order Anseriformes). Most swans are classified in the genus Cygnus. Swans are graceful, long-necked, heavy-bodied birds with large legs that glide majestically when swimming and have a slow wingbeat and elongated neck when flying. They migrate diagonally or in a V-shape at high altitudes and no other waterfowl moves as fast on the water or in the air.

CRANE

Scientific Name:- Gruidae

Cranes are one of 15 species of large pond birds in the family Gruidae (order Gruiformes). In appearance, cranes resemble herons, but are usually larger and have a partially bald head, a heavier beak, more compact plumage, and an erect hind tip. In flight, the long neck is stretched forward and the trapezoid legs are pulled back.

CUCKOO

Scientific Name:- Cuculidae

Cuckoo, any of numerous birds of the cuckoo family (cuckoo order). The name usually refers to about 60 arboreal members of the subfamilies Cuculinae and Phaenicophaeinae. In western Europe, the term “cuckoo”, without modifiers, refers to the most common local form, also known as the common or European cuckoo (*Cuculus canorus*). Many cuckoos have special names, such as Ani, Coua, Coucal, Guira, and Roadrunner. Members of the subfamily Neomorphinae are called ground cuckoos.
